

List of RMP Map Updates and Adjustments

The following list is an excerpt taken from the Highlands Initial Assessment Report which identified map adjustments and updates that Hampton Borough intends to submit for Highlands Council approval.

RMP Mapping Revisions

Proposed Highlands Subzones

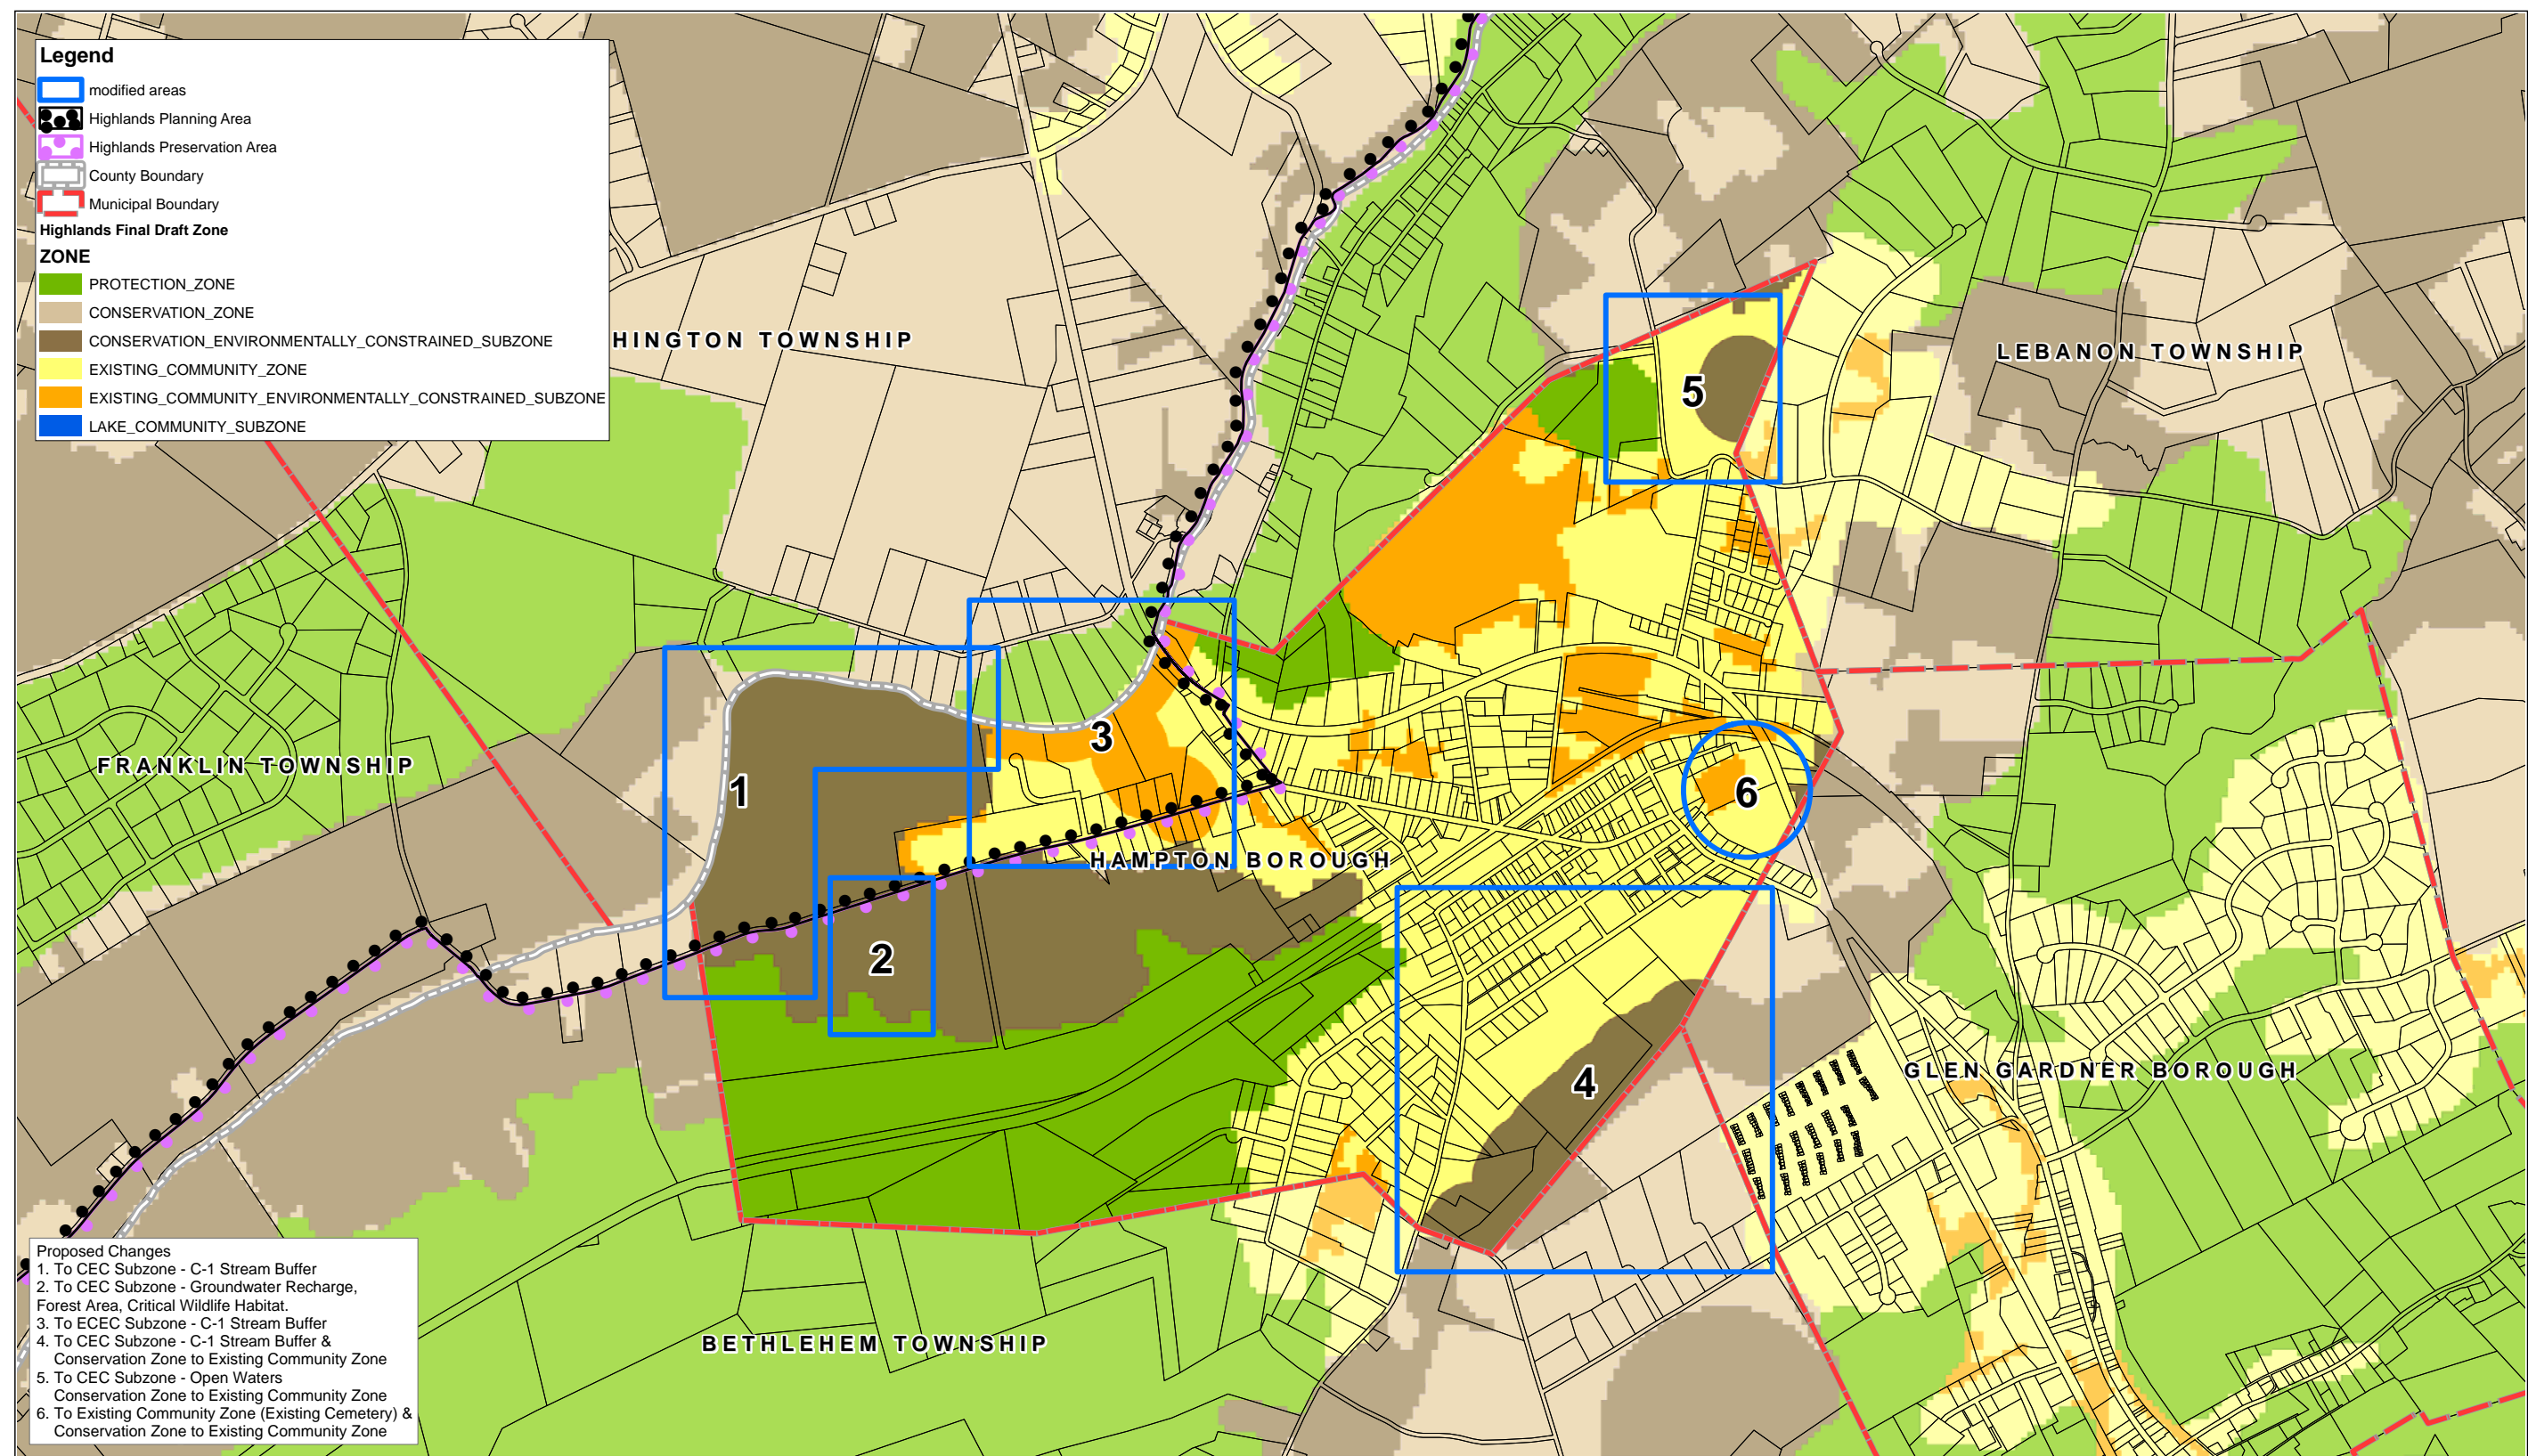

Hampton Borough has identified seven RMP updates and one Map Adjustment for consideration by the Highlands Council. These are detailed on the proposed Highlands Sub Zone Map and Proposed Forest Resource Map and specific targets are circled in blue. In addition, the Hampton Borough Environmental Commission and Planning Board are recommending a Map Adjustment for Block 23 Lot 1 found currently in the Conservation Environmentally Constrained Sub-zone of the Planning Area. The Board conducted a thorough environmental review of this area where the Borough's potable water supply wellhead protection area is located. Protection of this land is critical to maintaining the water quality and supply for the Borough. The Board recommends a Map revision to change the Sub-zone to Protection Area. Comprehensive RMP Updates with factual corrections and a formal Map Adjustment request will be forwarded by the Borough during Plan Conformance.

- 1. The C-1 stream buffer has not been identified as an environmental constraint. The Sub zone should be amended to become Conservation Zone Environmentally Constrained.
- 2. The small sections of Conservation Sub Zone correspond to forested hedgerows and should be included in the environmentally constrained area of the sub zone.
- 3. An unnamed tributary to the Musconetcong and the riparian area around the Musconetcong River have not been included in the environmental constraints. This area should be changed to Existing Community Environmentally Constrained sub zone.

- 4. The C-I stream buffer has not been identified as an environmental constraint. The Sub zone should be amended to become Conservation Zone Environmentally Constrained. The remaining Conservation sub zone lands in this area are closely associated with existing development. These lands should be designated as Existing Community sub zone.
- 5. The pond has not been identified as Highlands open water and 300 foot buffers are not included as an environmental constraint. The remainder of the lot is surrounded by existing community and should possibly also be designated as existing community sub zone.
- 6. Block 7 Lot 8 is a cemetery. It should be noted as Existing Community Zone. The parcel to the south of the cemetery is completely surrounded by existing development and should be re-designated Existing Community sub zone.

Proposed Forest Resource Area

The Proposed Forest Resource Area Map indicates proposed additions to the Forest Resource Area to include areas of forest which are important connections between fragmented forest patches. Hedgerows, stream corridors, and small patches of forest serve as valuable migration routes for wildlife as well as providing cover and connection to larger forest habitat. Comparison with the Critical Wildlife Habitat Map supports the recommended changes. See maps on the following pages.
